THE ENFIELD  
FINAL  
CONFERENCE  
2026**

## ENFIELD FINAL CONFERENCE 2026 ADVANCING EUROPE'S AI FUTURE

**7–8 July 2026 | Brussels, Belgium**

The ENFIELD Final Conference brought together researchers, industry leaders, policymakers, and AI professionals for two days of discussion, demonstrations, and collaboration in Brussels.

The program explored how Europe can further advance Green, Adaptive, Human-Centric, and Trustworthy AI while addressing sustainability, regulation, transparency, technological sovereignty, and real-world impact.

Keynotes, expert panels, and demonstrations connected ENFIELD's research achievements with the future needs of European society and industry.

**Connecting research, policy, innovation, and real-world AI impact across Europe.**

### KEY THEMES

- Sustainable AI and green data centres for Europe's digital future
- Edge AI and trustworthy systems for real-world applications
- Human-centred, explainable, and responsible AI innovation
- Europe's AI skills, policy, and global competitiveness

# AI AND CYBERSECURITY IN FOCUS ENFIELD SUMMER SCHOOL 2026

**15–17 July 2026 | Mytilini, Greece**

The ENFIELD Summer School 2026 brought together students, researchers, professionals, and experts from different countries for three intensive days of learning, discussion, and hands-on exploration of AI and cybersecurity in Mytilini, Greece.

Co-located with IPICS 2026, the program addressed Large Language Model vulnerabilities, adversarial attacks and defence, prompt injection, machine unlearning, public trust in AI, and cybersecurity challenges in smart energy systems. Expert lectures and practical exercises created new opportunities for collaboration across AI, cybersecurity, and trustworthy digital technologies.

## ENFIELD IN ATHENS: INNOVATION AND HEALTHCARE

### AI IN HEALTHCARE

#### 2nd ENFIELD Healthcare Workshop

Held on 14 May at the National Technical University of Athens, the event explored how trustworthy and responsible AI can support the future of healthcare.

Discussions covered public trust and acceptance, wearable biomarkers, clinical-data bias, secure medical records, digital twins, rehabilitation technologies, and EEG-to-speech and text decoding.

The event highlighted the need for healthcare AI that is transparent, secure, inclusive, and responsive to real clinical needs.

### FROM AI RESEARCH TO REAL IMPACT

#### 2nd ENFIELD Innovation Workshop

On 13 May, the ENFIELD community met at the National Technical University of Athens to explore how AI research can create real impact. The programme covered innovation, intellectual property, market opportunities, and practical applications. Beneficiaries of the 2nd Innovation Open Call presented solutions to real industrial challenges and connected with potential collaborators.

# RESEARCH MOBILITY TURNING IDEAS INTO IMPACT

## TES#3 Strengthens Research Collaboration Across Europe

Through its 3rd Exchange Scheme Open Call, ENFIELD supported mobility-based research exchanges addressing targeted scientific and technological challenges in artificial intelligence.

By connecting individual researchers with leading European Centres of Excellence, TES#3 strengthened knowledge exchange, cross-institutional collaboration, and cooperation across Europe's AI ecosystem. The exchanges brought together expertise from research organisations, universities, and industry across ENFIELD's Green, Adaptive, Human-Centric, and Trustworthy AI pillars.

TES#3 brought together universities, research centres, and industry partners from across Europe, including SINTEF, Know Center, BME, TU Chemnitz, ICCS-NTUA, Telenor, Eindhoven University of Technology, Boeing, and other leading organisations.

## BUILDING ON TES#2: EXAMPLES OF EARLIER FUNDED EXCHANGES

## AI HELPS IDENTIFY EARLY SIGNS OF ENERGY POVERTY

ENFIELD partners are working with the Municipality in Maia, Portugal, to explore how artificial intelligence can help identify households at risk of energy poverty.

The initiative combines socioeconomic information with energy-consumption data to support earlier detection and timely intervention. The model aims not only to recognise families already affected, but also to predict emerging cases before health and wellbeing are seriously impacted.

If successful, the approach could be adapted for other European regions.

**Using data responsibly to support vulnerable households**

## KNOWLEDGE SHARING ACROSS EUROPE ENFIELD Webinar Series 2026

From March to July 2026, ENFIELD partners organised a broad program of online webinars across the project's AI pillars and industrial domains.

Topics included sustainable AI, Earth observation, LLMs in cybersecurity, explainable AI, wearable health monitoring, knowledge graphs, smart power grids, sustainable mobility, and AI in future factories.

The series connected researchers, students, industry professionals, and practitioners across Europe.

# ENFIELD'S LEGACY:

## COLLABORATION, SYNERGIES AND WHAT COMES NEXT

Building lasting impact across Europe's AI ecosystem

### STRENGTHENING EUROPE'S AI ECOSYSTEM ELSA Final General Assembly & Workshop

ENFIELD continued strengthening cooperation with other European AI Networks of Excellence through participation in the ELSA Final General Assembly and Workshop in Saarbrücken, Germany.

Represented by Aida Akbarzadeh from NTNU, ENFIELD exchanged knowledge with researchers and European AI initiatives while presenting recent work on trust- and risk-aware human-AI collaboration in AI-enabled Operational Technology systems.

The research addresses human control, cybersecurity, responsibility, and governance in safety-critical environments, supporting more secure and trustworthy AI deployment.

### PROJECT SYNERGY SPOTLIGHT: MAGICIAN AI-powered robotics for better manufacturing

MAGICIAN is a Horizon Europe project developing AI-powered robotic systems for defect detection, classification, and autonomous reworking in manufacturing.

By combining advanced perception, robotics, and human-centred design, the project aims to improve product quality, efficiency, and safety while supporting intuitive human-robot collaboration.

Synergies between ENFIELD and MAGICIAN help strengthen cooperation in trustworthy AI, robotics, and advanced manufacturing.

### CONNECTING INNOVATION WITH OPPORTUNITY AI NoEs Horizons and Beyond

Through the series, ENFIELD joined ELIAS and dAIEDGE to discuss funding, collaboration, and Open Call opportunities across Europe's AI ecosystem. The session helped researchers, SMEs, and innovators better understand how European Networks of Excellence can support new ideas, partnerships, visibility, and research impact.

## LOOKING AHEAD

### Building a lasting impact for Europe

As ENFIELD moves beyond its final conference and research activities, its legacy continues through collaborations, funded exchanges, open research outputs, and connections across Europe's AI ecosystem.

The project has brought together researchers, industry, policymakers, and citizens around a shared ambition: advancing Green, Adaptive, Human-Centric, and Trustworthy AI with meaningful impact for Europe.

**Together, we continue shaping a trustworthy, sustainable, and human-centred AI future for Europe.**
